

SMART AGRICULTURE

Smarter fields. Better yield.

With the advent of technology, industries all around the world are getting automated, and agriculture is no exception. Automation can proficiently moderate the amount of manual labour, and make farming easier and faster, leading to more agricultural growth and productivity. Using YSV Agriculture solution, we want to help farmers automate the operation of motor pumps in their farms using IoT technology, so that they can operate the pumps from anywhere in the world with a single tap on their phone.

YSV Agriculture Solution

Our Smart Agriculture Solution consists of a smart motor panel and the Smart Agriculture app. You can easily install the motor panel and use YSV Agriculture app to operate any motor in your farm using a smartphone.

YSV Motor Panel

YSV motor panel works with all kinds of agricultural motors. The motor panel continuously relays information about its working status to YSV's agriculture app in real-time.

Convenience for the farmer

Managing large farms is now easier. You no longer have to walk back and forth in the farm to turn on a motor. Quickly do it with a tap on your phone.

YSV's Smart Motor panel comes with better safety and durability at the same price of an ordinary motor panel available in the market. No more replacing components in the motor panel every 6 months.
